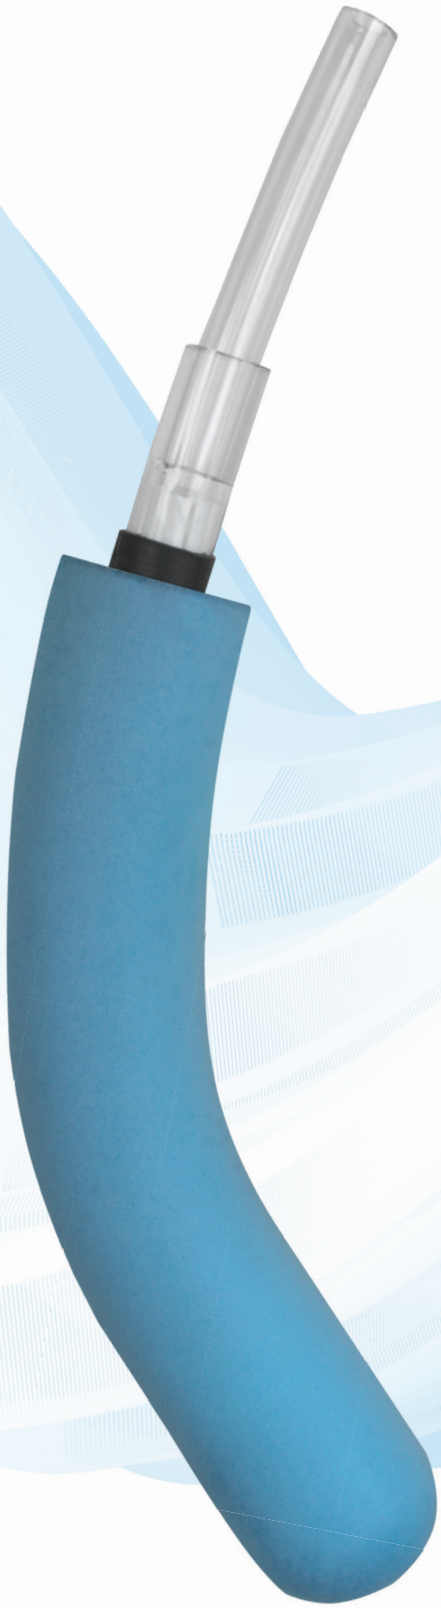
CareDry® System

The Next Evolution in Urinary Management



The CareDry® System, with its novel **antimicrobial sponge**, is designed to free up nursing time while providing dryness and comfort for your patients.

- **Up to 67% fewer** product changes*
- **5x greater surface area** for effective moisture control
- **Does not rely on gravity** for liquid collection

SCAN FOR DEMO

** indicated for up to 48 hrs of use, compared to 8-12 hr change interval of other female external catheters - data on file with Boehringer Laboratories*

BOEHRINGER®

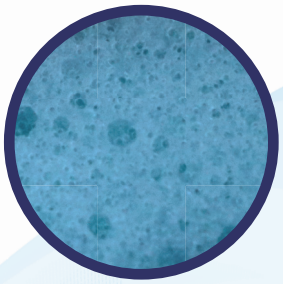
Your Best Solution for Urinary Management

Q24hr Change Interval*

Antimicrobial sponge actively inhibits harmful bacteria formation+, allowing for extended patient use.

100% Moisture-Wicking

Optimal pore size and foam structure with 5x the surface area of leading competitors provide rapid dryness and comfort for your patients.



Anatomically Conforming

Medical-grade foam protects against leaks in any position by contouring to the patient's unique body shape.

360-Degree Suction

Circumferential suction from a 4-channel core draws moisture away quickly from the patient and surrounding environment.
