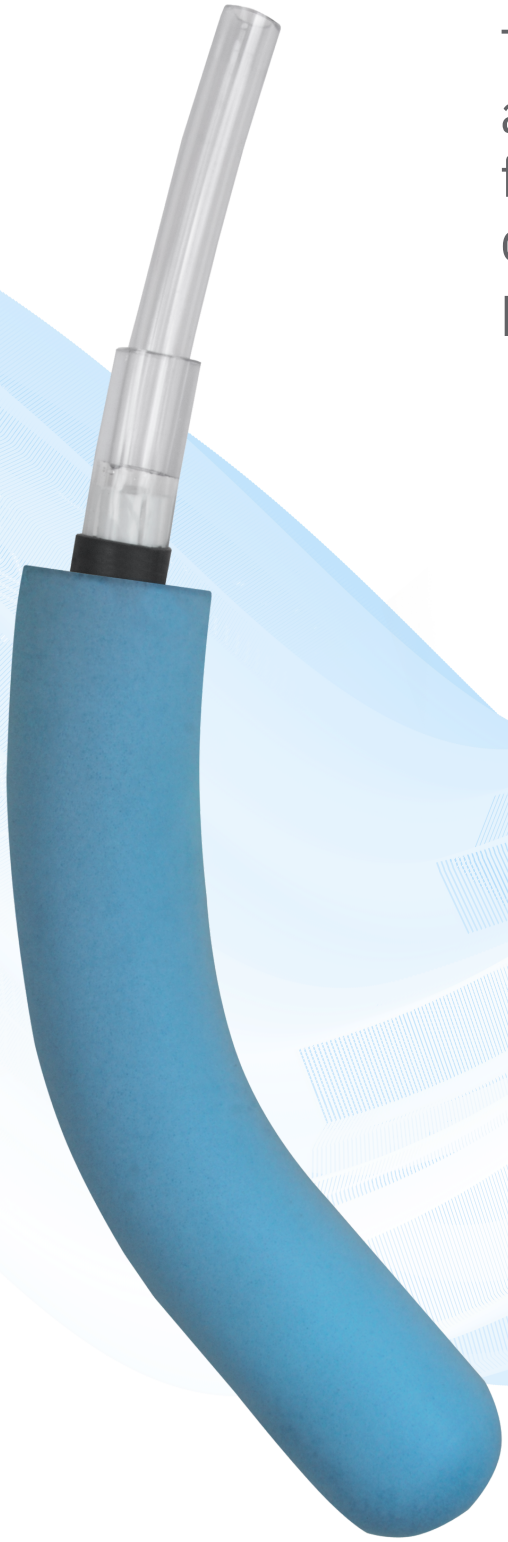
CareDry® System

The Next Evolution in Urinary Management



The CareDry® System, with its novel antimicrobial sponge, is designed to free up nursing time while providing dryness and comfort for your patients.

- Up to 67% fewer product changes*
- 5x greater surface area for effective moisture control
- Does not rely on gravity for liquid collection

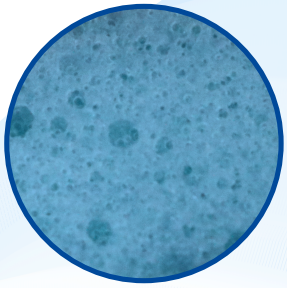
** indicated for up to 48 hrs of use, compared to 8-12 hr change interval of other female external catheters - data on file with Boehringer Laboratories*

BOEHRINGER®

Your Best Solution for Urinary Management

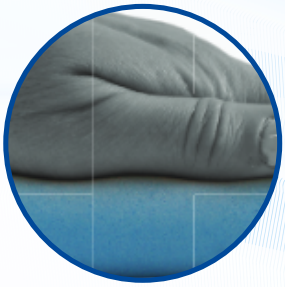
48-hour Change Interval*
Antimicrobial sponge actively inhibits harmful bacteria formation on the sponge**, allowing for extended patient use.



100% Moisture-Wicking
Optimal pore size and foam structure with 5x the surface area of leading competitors provide rapid dryness and comfort for your patients.

Anatomically Conforming

Medical-grade foam protects against leaks in any position by contouring to the patient's unique body shape.



360-Degree Suction
Circumferential suction from a 4-channel core draws moisture away quickly from the patient and surrounding environment.
